

CORRECTION TO “THE GEOMETRIES OF SPHERICAL MONTESINOS LINKS”

MAKOTO SAKUMA

- (1) As I apologized in my talk at the workshop,
“Encounter with Mathematics” 2-3, October, 2009 (Chuo Univ.),
http://www.math.chuo-u.ac.jp/ENCwMATH/51/ewm51_Sakuma3.pdf
I made a stupid mistake to confuse *orbits invariants* with *Seifert invariants* for singular fibers of Seifert fibrations (Sections 1 - 3). But, this does not affect the results in Sections 4-6. I hope to correct the mistake in a sequel of the paper, which gives more detailed study of the spherical geometry of spherical Montesinos links.
- (2) There is a bad misprint in the statement of Theorem 4.1, though the correct statement can be found in the tables in p.184. To be precise:
 - (a) Line -7:
Replace the incorrect condition ‘or p is even and $q^2 \equiv 1 \pmod{2p}$ ’
with the correct condition ‘or p is even and $q^2 \equiv p + 1 \pmod{2p}$ ’
 - (b) Line -6:
Replace the incorrect condition ‘or p is even and $q^2 \equiv p + 1 \pmod{2p}$ ’
with the correct condition ‘or p is even and $q^2 \equiv 1 \pmod{2p}$ ’
